

Carbon Accounting Services

Meeting the changing needs of business

Local Carbon

A Human Approach to Carbon Accounting

NAVIGATING SUSTAINABILITY

Sustainability is at the top of the agenda for many businesses - but it's not always simple or affordable to navigate. The starting point for nearly every business is understanding their emissions footprint, to a level of quality the business can confidently stand behind. Once the business has this information, it can start making decisions to reduce emissions and save costs.

The benefits of taking sustainability seriously are increasingly significant. Businesses can achieve cost savings, increase brand value, establish a competitive advantage, meet the changing expectations of customers, increase the efficiency of the operation, attract and keep the best employees and identify new opportunities in the way they do business.

Often, around 80% of emissions exist within the value chain including those that result from contractors and suppliers. If organisations don't understand the total emissions associated with their operation, it's hard to have an impact.

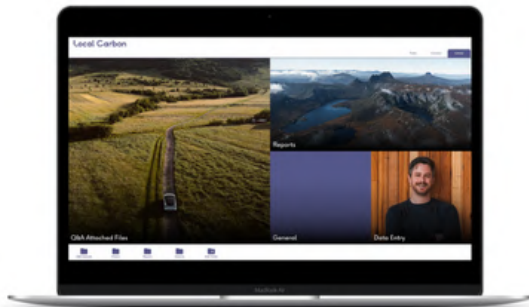

OVERVIEW

We use Local Carbon to provide our clients with carbon accounting services.

As consumer expectations evolve, we understand businesses need confidence in their carbon footprint. They need to be able to communicate authentic and powerful stories in relation to their impact and the steps they are taking to reduce it.

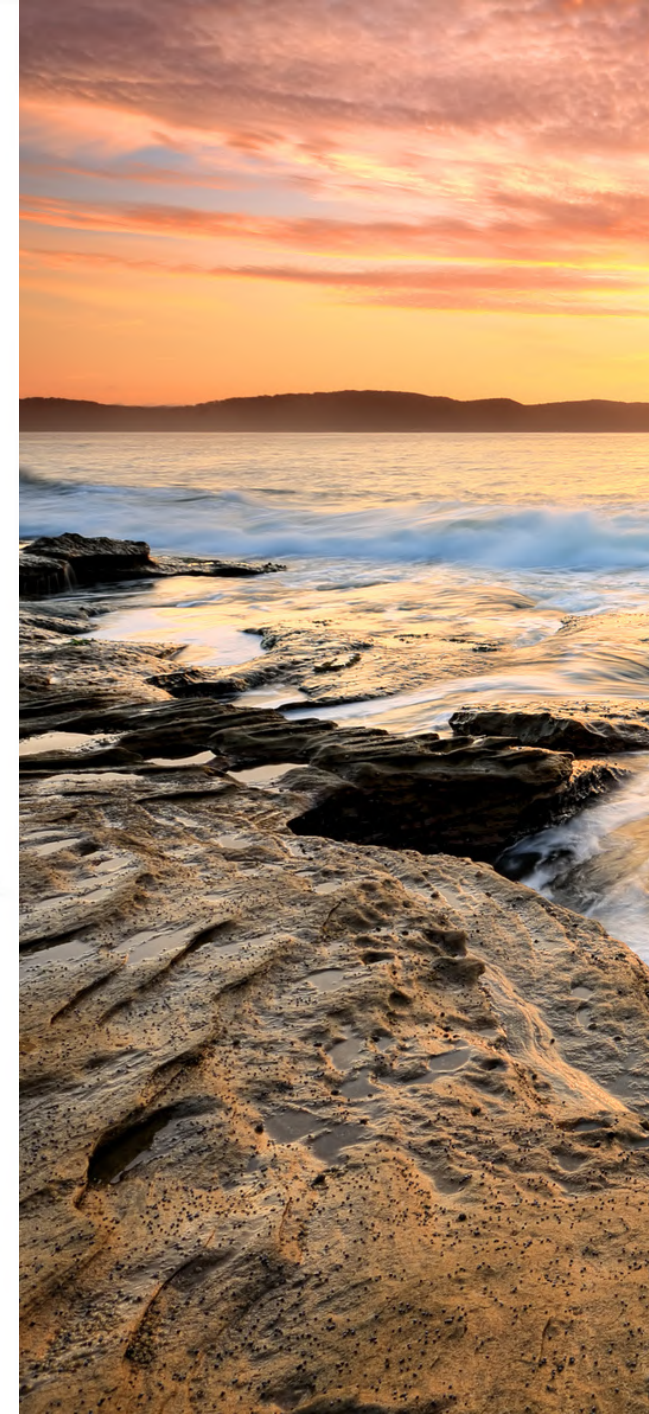

That's why we provide both carbon accounting and traditional accounting services. The world is changing and we're right there with you.

You will have access to your own Local Carbon Platform with features to support your carbon accounting process

Our Accountants calculate emissions in accordance with the Greenhouse Gas Standards. Findings are presented in interactive dashboards in the platform.

We help you identify opportunities to save costs and reduce emissions.
